CONFORMANCE STATEMENT OVERVIEW

CortexID Suite is a PET image display and analysis application developed for use on the GE Advantage Workstation and Advantage Workstation Enterprise Server. CortexID Suite does not provide or use any network services directly. CortexID Suite reads and displays PET CT and MR images from the workstation platform database. The images are stored on the Advantage Workstation database. All network services are provided by the workstation platform directly. For a complete description of the networking services refer to the workstation platform conformance statement. See section 1.6 for references.

Table 0.1 provides an overview of the SOP Classes that are supported by CortexID Suite

Table 0.1 – APPLICATION USE

| SOP Classes | Reader | Writer |
|--|--------|--------|
| CT Image Storage | Yes | No |
| MR Image Storage | Yes | No |
| Secondary Capture Image Storage | No | Yes |
| Positron Emission Tomography Image Storage | Yes | Yes |
| Encapsulated PDF Image Storage | No | Yes |

1. INTRODUCTION

1.1 OVERVIEW

This DICOM Conformance Statement is divided into Sections as described below:

Section 1 (Introduction), which describes the overall structure, intent, and references for this Conformance Statement

Section 2 (Media Storage Conformance Statement), which specifies the GE HEALTHCARE equipment compliance to the DICOM requirements for the implementation of Media Storage features.

Section 3 (CT Information Object Implementation), which specifies the GE HEALTHCARE equipment compliance to DICOM requirements for the implementation of a CT Information Object.

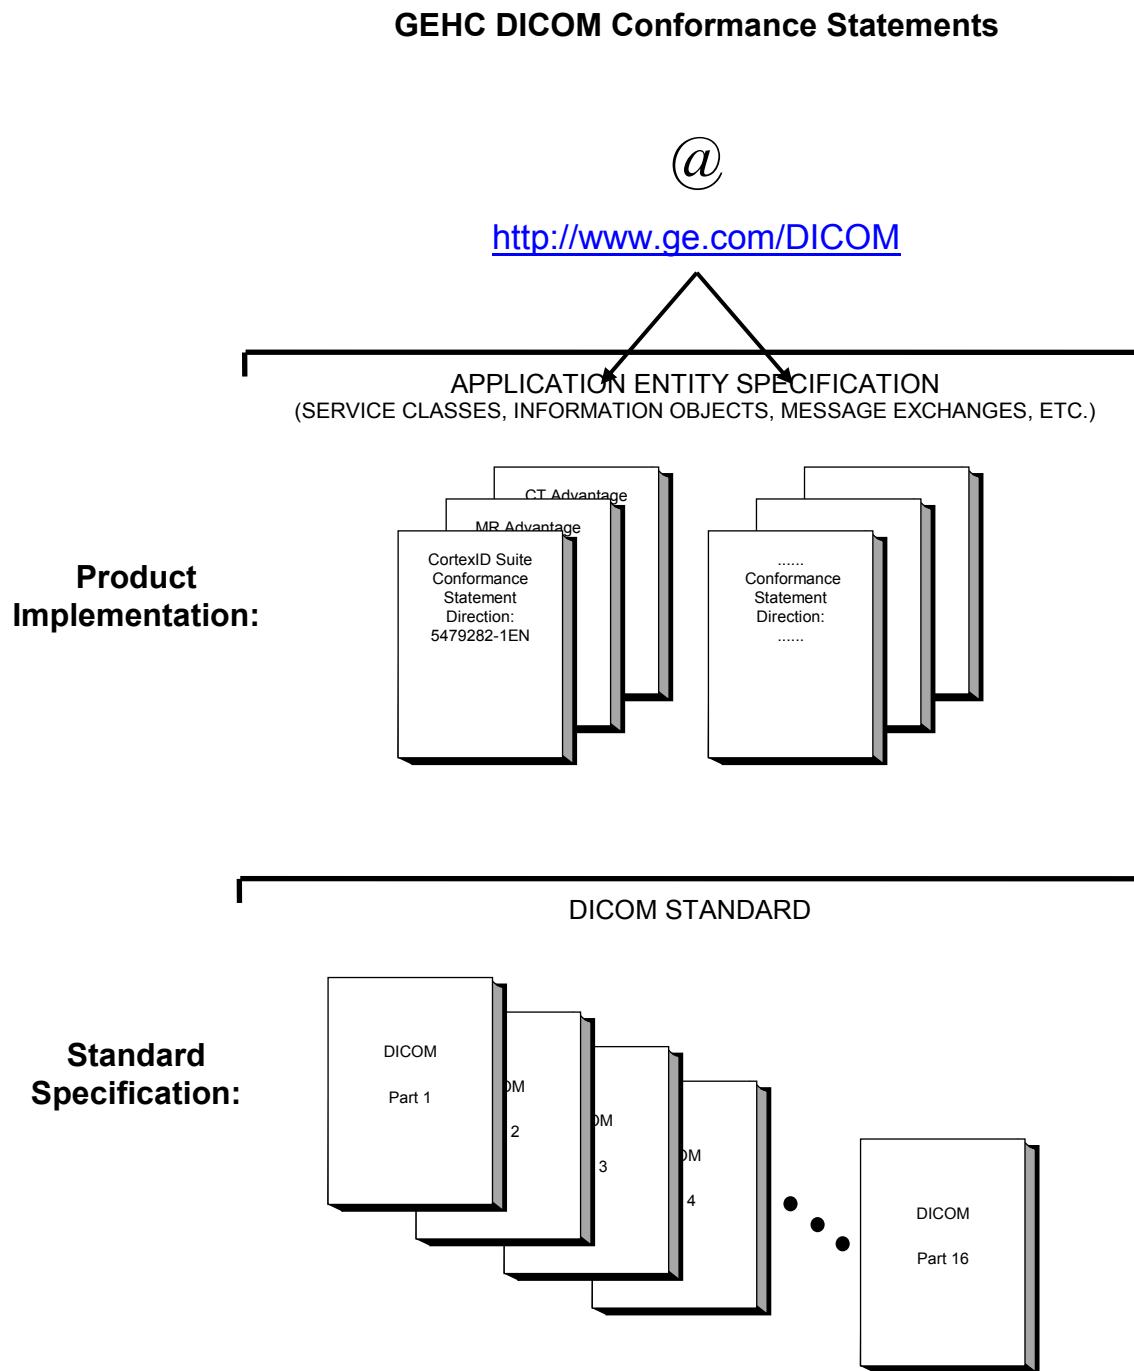

Section 4 (MR Information Object Implementation), which specifies the GE HEALTHCARE equipment compliance to DICOM requirements for the implementation of a MR Information Object.

Section 5 (PET Information Object Implementation), which specifies the GE HEALTHCARE equipment compliance to DICOM requirements for the implementation of a PET Information Object.

Section 6 (Secondary Capture Information Object Implementation), which specifies the GE HEALTHCARE equipment compliance to DICOM requirements for the implementation of a Secondary Capture Information Object.

1.2 OVERALL DICOM CONFORMANCE STATEMENT DOCUMENT STRUCTURE

The Documentation Structure of the GE HEALTHCARE Conformance Statements and their relationship with the DICOM Conformance Statements is shown in the Illustration below.

This document specifies the DICOM implementation. It is entitled:

CortexID Suite 2.1
Conformance Statement for DICOM
Direction: 5479282-1EN

For more information regarding DICOM, copies of the Standard may be obtained on the Internet at <http://medical.nema.org>. Comments on the Standard may be addressed to:

DICOM Secretariat
NEMA
1300 N. 17th Street, Suite 1752
Rosslyn, VA 22209
USA
Phone: +1.703.841.3200

1.3 INTENDED AUDIENCE

The reader of this document is concerned with software design and/or system integration issues. It is assumed that the reader of this document is familiar with the DICOM Standard and with the terminology and concepts which are used in that Standard.

1.4 SCOPE AND FIELD OF APPLICATION

It is the intent of this document to provide an unambiguous specification for GEHC implementations. This specification, called a Conformance Statement, includes a DICOM Conformance Statement and is necessary to ensure proper processing and interpretation of GEHC medical data exchanged using DICOM. The GEHC Conformance Statements are available to the public.

The reader of this DICOM Conformance Statement should be aware that different GEHC devices are capable of using different Information Object Definitions. For example, a GEHC CT Scanner may send images using the CT Information Object, MR Information Object, Secondary Capture Object, etc.

Included in this DICOM Conformance Statement are the Module Definitions which define all data elements used by this GEHC implementation. If the user encounters unspecified private data elements while parsing a GEHC Data Set, the user is well advised to ignore those data elements (per the DICOM standard). Unspecified private data element information is subject to change without notice. If, however, the device is acting as a "full fidelity storage device", it should retain and re-transmit all of the private data elements which are sent by GEHC devices.

1.5 IMPORTANT REMARKS

The use of these DICOM Conformance Statements, in conjunction with the *DICOM* Standards, is intended to facilitate communication with GE imaging equipment. However, **by itself, it is not sufficient to ensure that inter-operation will be successful**. The **user (or user's agent)** needs to proceed with caution and address at least four issues:

- **Integration** - The integration of any device into an overall system of interconnected devices goes beyond the scope of standards (*DICOM*), and of this introduction and associated DICOM Conformance Statements when interoperability with non-GE equipment is desired. The responsibility to analyze the applications requirements and to design a solution that integrates GE imaging equipment with non-GE systems is the **user's** responsibility and should not be underestimated. The **user** is strongly advised to ensure that such an integration analysis is correctly performed.

- **Validation** - Testing the complete range of possible interactions between any GE device and non-GE devices, before the connection is declared operational, should not be overlooked. Therefore, the **user** should ensure that any non-GE provider accepts full responsibility for all validation required for their connection with GE devices. This includes the accuracy of the image data once it has crossed the interface between the GE imaging equipment and the non-GE device and the stability of the image data for the intended applications.

Such a validation is required before any clinical use (diagnosis and/or treatment) is performed. It applies when images acquired on GE imaging equipment are processed/displayed on a non-GE device, as well as when images acquired on non-GE equipment is processed/displayed on a GE console or workstation.

- **Future Evolution** - GE understands that the DICOM Standard will evolve to meet the user's growing requirements. GE is actively involved in the development of the *DICOM* Standard. *DICOM* will incorporate new features and technologies and GE may follow the evolution of the Standard. The GE HEALTHCARE protocol is based on *DICOM* as specified in each DICOM Conformance Statement. Evolution of the Standard may require changes to devices, which have implemented *DICOM*. In addition, GE reserves the right to discontinue or make changes to the support of communications features (on its products) reflected on by these DICOM Conformance Statements. The **user** should ensure that any non-GE provider, which connects with GE devices, also plans for the future evolution of the DICOM Standard. Failure to do so will likely result in the loss of function and/or connectivity as the DICOM Standard changes and GE Products are enhanced to support these changes.
- **Interaction** - It is the sole responsibility of the **non-GE provider** to ensure that communication with the interfaced equipment does not cause degradation of GE imaging equipment performance and/or function.

1.7 DEFINITIONS

Informal definitions are provided for the following terms used in this Conformance Statement. The DICOM Standard is the authoritative source for formal definitions of these terms.

Abstract Syntax - the information agreed to be exchanged between applications, generally equivalent to a Service/Object Pair (SOP) Class. Examples : Verification SOP Class, Modality Worklist Information Model Find SOP Class, Computed Radiography Image Storage SOP Class.

Application Entity (AE) - an end point of a DICOM information exchange, including the DICOM network or media interface software; i.e., the software that sends or receives DICOM information objects or messages. A single device may have multiple Application Entities.

Application Entity Title - the externally known name of an *Application Entity*, used to identify a DICOM application to other DICOM applications on the network.

Application Context - the specification of the type of communication used between *Application Entities*. Example: DICOM network protocol.

Association – a network communication channel set up between *Application Entities*.

Attribute – a unit of information in an object definition; a data element identified by a **tag**. The information may be a complex data structure (Sequence), itself composed of lower level data elements. Examples: Patient ID (0010,0020), Accession Number (0008,0050), Photometric Interpretation (0028,0004), Procedure Code Sequence (0008,1032).

Information Object Definition (IOD) – the specified set of *Attributes* that comprise a type of data object; does not represent a specific instance of the data object, but rather a class of similar data objects that have the same properties. The *Attributes* may be specified as Mandatory (Type 1), Required but possibly unknown (Type 2), or Optional (Type 3), and there may be conditions associated with the use of an Attribute (Types 1C and 2C). Examples: MR Image IOD, CT Image IOD, Print Job IOD.

Joint Photographic Experts Group (JPEG) – a set of standardized image compression techniques, available for use by DICOM applications.

Media Application Profile – the specification of DICOM information objects and encoding exchanged on removable media (e.g., CDs)

Module – a set of *Attributes* within an *Information Object Definition* that are logically related to each other. Example: Patient Module includes Patient Name, Patient ID, Patient Birth Date, and Patient Sex.

Negotiation – first phase of *Association* establishment that allows *Application Entities* to agree on the types of data to be exchanged and how that data will be encoded.

Presentation Context – the set of DICOM network services used over an *Association*, as negotiated between *Application Entities*; includes *Abstract Syntaxes* and *Transfer Syntaxes*.

Protocol Data Unit (PDU) – a packet (piece) of a DICOM message sent across the network. Devices must specify the maximum size packet they can receive for DICOM messages.

Security Profile – a set of mechanisms, such as encryption, user authentication, or digital signatures, used by an *Application Entity* to ensure confidentiality, integrity, and/or availability of exchanged DICOM data

Service Class Provider (SCP) – role of an *Application Entity* that provides a DICOM network service; typically, a server that performs operations requested by another *Application Entity* (*Service Class User*). Examples: Picture Archiving and Communication System (image storage SCP, and image query/retrieve SCP), Radiology Information System (modality worklist SCP).

Service Class User (SCU) – role of an *Application Entity* that uses a DICOM network service; typically, a client. Examples: imaging modality (image storage SCU, and modality worklist SCU), imaging workstation (image query/retrieve SCU)

Service/Object Pair (SOP) Class – the specification of the network or media transfer (service) of a particular type of data (object); the fundamental unit of DICOM interoperability specification. Examples: Ultrasound Image Storage Service, Basic Grayscale Print Management.

Service/Object Pair (SOP) Instance – an information object; a specific occurrence of information exchanged in a *SOP Class*. Examples: a specific x-ray image.

Tag – a 32-bit identifier for a data element, represented as a pair of four digit hexadecimal numbers, the “group” and the “element”. If the “group” number is

odd, the tag is for a private (manufacturer-specific) data element. Examples: (0010,0020) [Patient ID], (07FE,0010) [Pixel Data], (0019,0210) [private data element]

Transfer Syntax – the encoding used for exchange of DICOM information objects and messages. Examples: JPEG compressed (images), little endian explicit value representation.

Unique Identifier (UID) – a globally unique “dotted decimal” string that identifies a specific object or a class of objects; an ISO-8824 Object Identifier. Examples: Study Instance UID, SOP Class UID, SOP Instance UID.

Value Representation (VR) – the format type of an individual DICOM data element, such as text, an integer, a person’s name, or a code. DICOM information objects can be transmitted with either explicit identification of the type of each data element (Explicit VR), or without explicit identification (Implicit VR); with Implicit VR, the receiving application must use a DICOM data dictionary to look up the format of each data element.

| U | Unique (Key Attribute) |

1.9 TERMS DEFINITIONS

In the following conformance statement, the following terms describe the use of each of the DICOM tags. When *CortexID Suite* is loading DICOM data files, we use the following terms:

- **Ignored:** the software will ignore the value of the tag. Data elements not present in the defined tables are assumed to be ignored.
- **Used:** the software might use at some point the value of this tag; the value could be used for computations, for display, or to regenerate the value of a secondary capture
- **Mandatory:** the software will need a valid value for this tag; this value will be used for computations and an invalid value will prevent the software to load the data

When the application is saving some reformatted or secondary capture images, we use the following terms:

- **Removed:** the tag is removed from the module and will be absent from the data set
- **Generated:** the software will generate a value, generally by computing a new value
- **Copied:** the software will try as much as possible to duplicate the value found in the source images if the value is the same on all the source images; if the value is not consistent, the tag will be absent from the data set if "Ignored" at load or possibly regenerated if "Used" at load

2. CONFORMANCE STATEMENT

CortexID Suite is a software application developed for use on the Advantage Windows workstations. This means that networking and media storage features are inherited from the Advantage Windows platform.

CortexID Suite allows users to generate the following types of DICOM images to the DICOM Database:

1. Reformatted Images
2. Secondary Screen Capture
3. PDF Encapsulated

The generated images may be transferred to other DICOM stations or PACS, where they may be displayed in any application capable of displaying such DICOM images.

CortexID Suite application is an analysis and review application. The user is typically a physician or technologist. The PET, CT and MR studies exist in the platform database, typically transferred ahead of time. The application requires a PET image series for input, with CT and MR series being optional. The images are processed and viewed in the application. For the purpose of sharing images in a report or with the patient or referring physician, the user may manually select specific slices or views for saving to SC images. The content of the report then can be saved to the DICOM Image Database as an Encapsulated PDF type.

For a complete description of the media storage conformance, refer to the AW 4.6 and AWE 3.1 conformance statements as the platforms upon which CortexID Suite runs (see section 1.6 REFERENCES).

The **goal of this document** is to give a detailed description of:

- The DICOM CT IODs that are required to reconstruct a 3-dimensional CT volume (section 3),
- The DICOM MR IODs that are required to reconstruct a 3-dimensional MR volume (section 4),
- The DICOM PET IODs that are required to reconstruct a 3-dimensional PET volume (section 5), DICOM PET IOD written by the application (section 5).
- The DICOM SC IODs written by the application (section 6).
- The DICOM PDF Encapsulated IODs written by the application (section 7).

SOP Classes Used as Input:

| Modality | SOP Class | Remarks |
|----------|-----------------------------|----------|
| CT | 1.2.840.10008.5.1.4.1.1.2 | Optional |
| PET | 1.2.840.10008.5.1.4.1.1.128 | Required |
| MR | 1.2.840.10008.5.1.4.1.1.4 | Optional |

SOP Classes Used as Output:

| Modality | SOP Class | Remarks |
|----------|-------------------------------|--------------------------|
| SC | 1.2.840.10008.5.1.4.1.1.7 | Secondary Screen Capture |
| PET | 1.2.840.10008.5.1.4.1.1.128 | PET Reformatted Images |
| DOC | 1.2.840.10008.5.1.4.1.1.104.1 | PDF Encapsulated Images |

Implementation Identifying Information

| Application Name | Implementation Class UID |
|------------------|--------------------------|
| CortexID Suite | 1.2.840.113619.6.381 |

Supported Character Sets

| Character Set | Comment |
|---------------------------------|--------------------------------------|
| ISO_IR 100 | Supported when running on AW and AWE |
| ISO_IR 144 | Supported when running on AWE |
| \ISO 2022 IR 87 | Supported when running on AWE |
| \ISO 2022 IR 149 | Supported when running on AWE |

| ISO 2022 IR 13 \ ISO 2022 IR 87 | Supported when running on AWE |

Images with unsupported character sets will not be loaded.

3. CT INFORMATION OBJECT IMPLEMENTATION

3.1 INTRODUCTION

This section specifies the use of the DICOM CT Image IOD to represent the information included in CT images used by this implementation. Corresponding attributes are conveyed using the module construct. The contents of this section are:

- 3.2 CT Entity-Relationship Model
- 3.3 IOD MODULE TABLE
- 3.4 INFORMATION MODULE DEFINITIONS

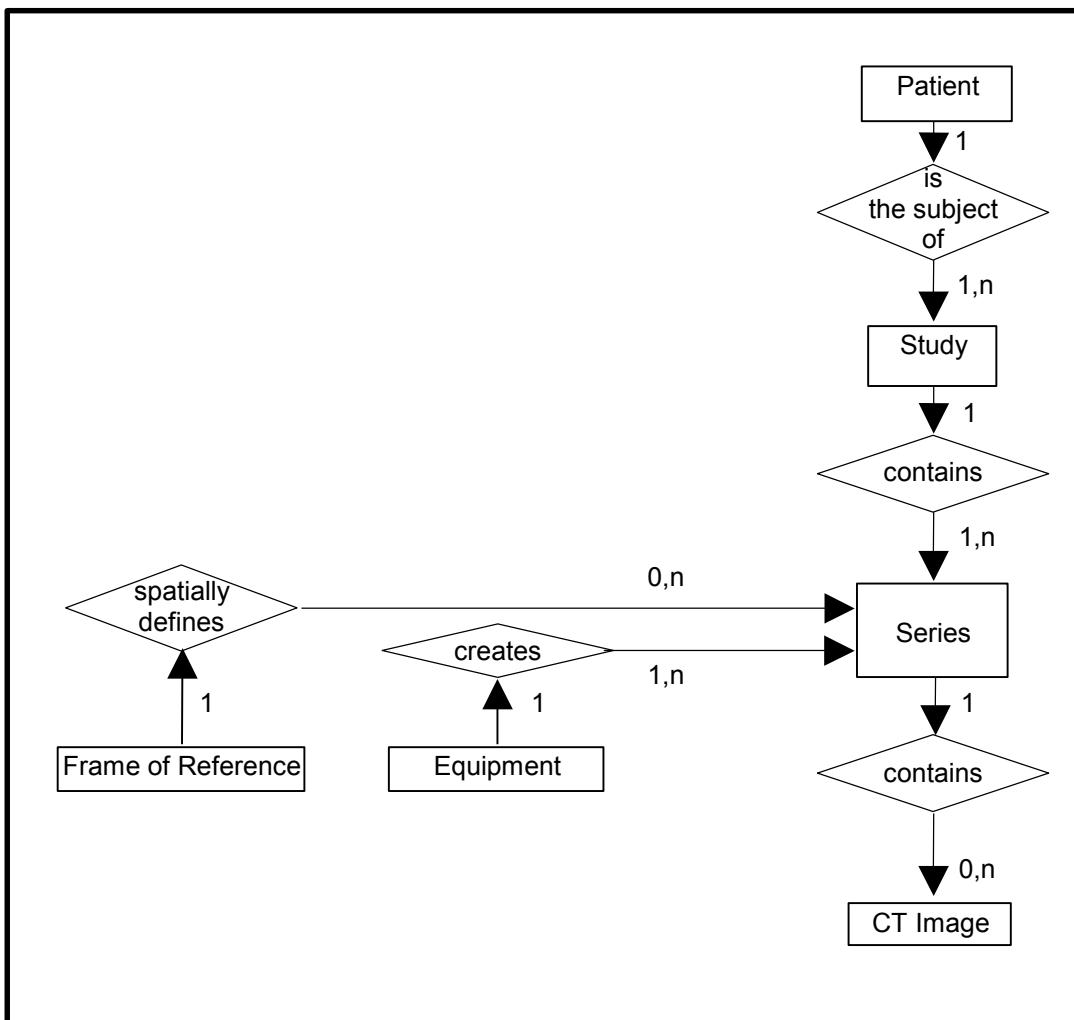

3.2 CT ENTITY-RELATIONSHIP MODEL

The Entity-Relationship diagram for the CT Image interoperability schema is shown in Illustration 3.2-1. In this figure, the following diagrammatic convention is established to represent the information organization:

- Each entity is represented by a rectangular box
- Each relationship is represented by a diamond shaped box.
- The fact that a relationship exists between two entities is depicted by lines connecting the corresponding entity boxes to the relationship boxes.

The relationships are fully defined with the maximum number of possible entities in the relationship shown. In other words, the relationship between Series and Image can have up to n Images per Series, but the Patient to Study relationship has 1 Patient for each Study (a Patient can have more than one Study on the system, however each Study will contain all of the information pertaining to that Patient).

ILLUSTRATION 3.2-1
CT IMAGE ENTITY RELATIONSHIP DIAGRAM

3.2.1 ENTITY DESCRIPTIONS

Please refer to DICOM Standard Part 3 (Information Object Definitions) for a description of each of the entities contained within the CT Information Object.

3.2.2 Mapping of DICOM entities

TABLE 3.2-1
MAPPING OF DICOM ENTITIES TO APPLICATION ENTITIES

| DICOM | Application Entity |
|---------|--------------------|
| Patient | Patient |
| Study | Exam |
| Series | Series |
| Image | Image |
| Frame | Not Applicable |

3.3 IOD MODULE TABLE

Within an entity of the DICOM v3.0 CT IOD, attributes are grouped into related set of attributes. A set of related attributes is termed a module. A module facilitates the understanding of the semantics concerning the attributes and how the

attributes are related with each other. A module grouping does not infer any encoding of information into datasets.

Table 3.3-1 identifies the defined modules within the entities which comprise the DICOM v3.0 CT IOD. Modules are identified by Module Name.

See DICOM v3.0 Part 3 for a complete definition of the entities, modules, and attributes.

**TABLE 3.3-1
CT IMAGE IOD MODULES**

| Entity Name | Module Name | Usage | Reference |
|--------------------|------------------------|----------|-----------|
| Patient | Patient | Used | 3.4.1.1 |

| | SOP Common | Used | 3.4.8.1 |

3.4 INFORMATION MODULE DEFINITIONS

Please refer to DICOM v3.0 Standard Part 3 (Information Object Definitions) for a description of each of the entities and modules contained within the CT Information Object.

The following modules are included to convey Enumerated Values, Defined Terms, and Optional Attributes supported. Type 1 & Type 2 Attributes are also included for completeness and to define what values they may take and from where these values are obtained. Associated tables contain expectations of the use of entities within the application. No CT images are generated by the application. It should be noted that they are the same ones as defined in the DICOM v3.0 Standard Part 3 (Information Object Definitions).

3.4.4 Common Frame Of Reference Entity Modules

The following Frame of Reference IE Module is common to all Composite Image IODs which reference the Frame of Reference IE.

3.4.4.1 Frame Of Reference Module

CT images should share the same Frame Of Reference UID as a necessary condition to be in the same 3D model. However, this is not sufficient, because images have also to share the same geometry (be parallel with compatible centers), have the same size, the same pixel size, the same tilt, the same study ID, the same reconstruction algorithm, and the same patient name.

TABLE 3.4-5
FRAME OF REFERENCE MODULE ATTRIBUTES

| Attribute Name | Tag | Type | Attribute Description |
|------------------------|-------------|------|-----------------------|
| Frame of Reference UID | (0020,0052) | 1 | Mandatory |

| | | | |
|------------------------------|-------------|---|---------|
| Position Reference Indicator | (0020,1040) | 2 | Ignored |
|------------------------------|-------------|---|---------|

3.4.5 Common Equipment Entity Modules

The following Equipment IE Module is common to all Composite Image IODs which reference the Equipment IE.

3.4.5.1 General Equipment Module

This section specifies the Attributes which identify and describe the piece of equipment which produced a Series of Images.

**TABLE 3.4-6
GENERAL EQUIPMENT MODULE ATTRIBUTES**

| Attribute Name | Tag | Type | Attribute Description |
|-------------------------------|-------------|------|-----------------------|
| Manufacturer | (0008,0070) | 2 | Used |

3.5 PRIVATE DATA

All private elements are ignored within the application.

4. MR INFORMATION OBJECT IMPLEMENTATION

4.1 INTRODUCTION

This section specifies the use of the DICOM MR Image IOD to represent the information included in MR images used by this implementation. Corresponding attributes are conveyed using the module construct. The contents of this section are:

- 4.2 MR IOD DESCRIPTION
- 4.3 MR ENTITY-RELATIONSHIP MODEL
- 4.4 IOD MODULE TABLE
- 4.5 INFORMATION MODULE DEFINITIONS

4.2 MR IOD DESCRIPTION

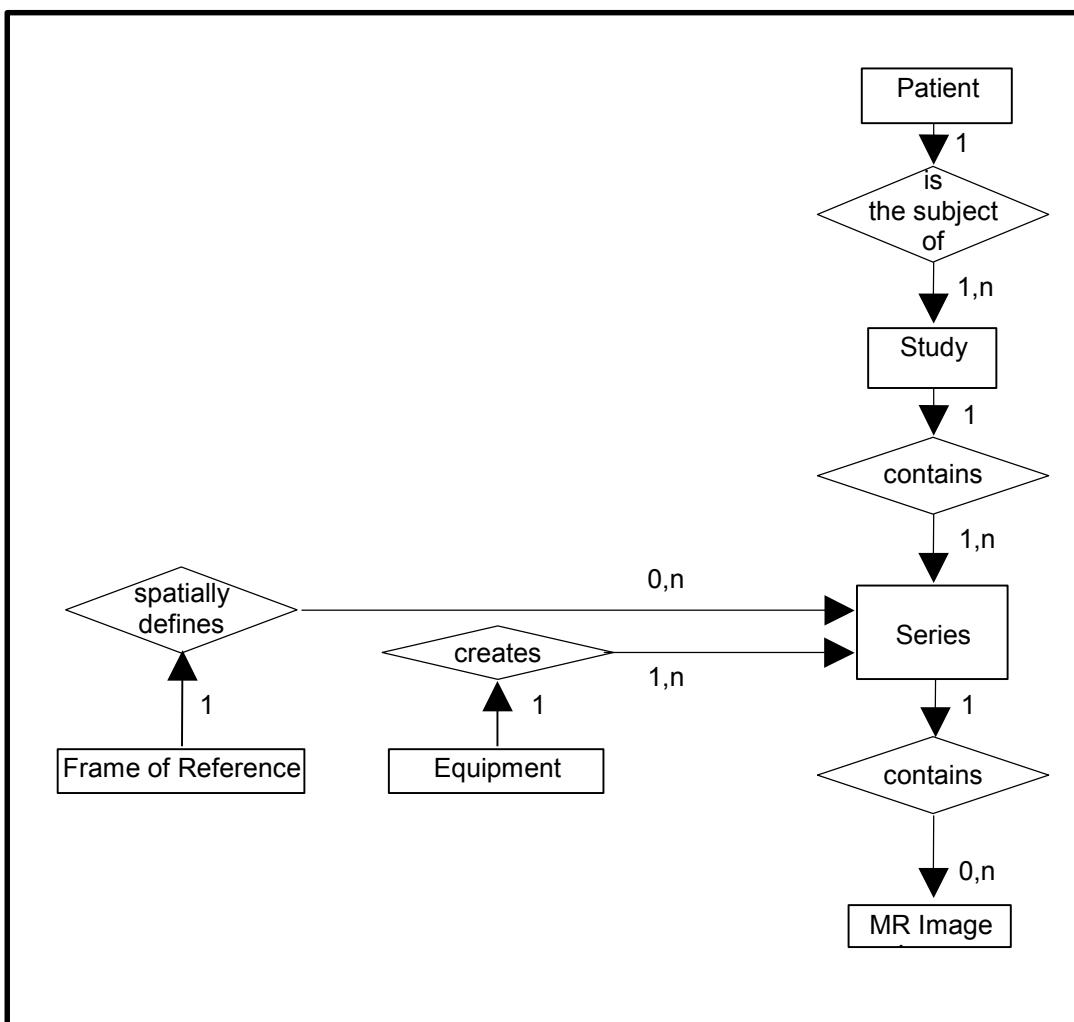

4.3 MR ENTITY-RELATIONSHIP MODEL

The Entity-Relationship diagram for the MR Image interoperability schema is shown in. In this figure Illustration-4.3.1, the following diagrammatic convention is established to represent the information organization :

- Each entity is represented by a rectangular box
- Each relationship is represented by a diamond shaped box.
- The fact that a relationship exists between two entities is depicted by lines connecting the corresponding entity boxes to the relationship boxes.

The relationships are fully defined with the maximum number of possible entities in the relationship shown. In other words, the relationship between Series and Image can have up to n Images per Series, but the Patient to Study relationship has 1 Patient for each Study (a Patient can have more than one Study on the system, however each Study will contain all of the information pertaining to that Patient).

ILLUSTRATION -4.3-1
MR IMAGE ENTITY RELATIONSHIP DIAGRAM

4.3.1 Entity Descriptions

Please refer to DICOM Standard Part 3 (Information Object Definitions) for a description of each of the entities contained within the MR Information Object.

TABLE 4.3-1
MAPPING OF DICOM ENTITIES TO APPLICATION ENTITIES

| DICOM | Application Entity |
|---------|--------------------|
| Patient | Patient |
| Study | Exam |
| Series | Series |
| Image | Image |
| Frame | Not Applicable |

4.4 IOD MODULE TABLE

Within an entity of the DICOM MR IOD, attributes are grouped into related set of attributes. A set of related attributes is termed a module. A module facilitates the understanding of the semantics concerning the attributes and how the attributes are related with each other. A module grouping does not infer any encoding of information into datasets.

Table 4.4-1 identifies the defined modules within the entities that comprise the DICOM MR IOD. Modules are identified by Module Name.

See DICOM Part 3 for a complete definition of the entities, modules, and attributes.

**TABLE 4.4-1
MR IMAGE IOD MODULES**

| Entity Name | Module Name | Usage | Reference |
|--------------------|------------------------|----------|-----------|
| Patient | Patient | Used | 4.5.1.1 |
| | Clinical Trial Subject | Not Used | N/A |
| Study | General Study | Used | 4.5.2.1 |
| | Patient Study | Used | 4.5.2.2 |
| | Clinical Trial Study | Not Used | N/A |
| Series | General Series | Used | 4.5.3.1 |
| | Clinical Trial Series | Not Used | N/A |
| Frame of Reference | Frame of Reference | Used | 4.5.4.1 |
| Equipment | General Equipment | Used | 4.5.5.1 |
| Image | General Image | Used | 4.5.6.1 |
| | Image Plane | Used | 4.5.6.3 |
| | Image Pixel | Used | 4.5.6.4 |
| | Contrast/Bolus | Used | 4.5.6.4 |
| | Device | Not Used | N/A |
| | Specimen | Not Used | N/A |
| | MR Image | Used | 4.5.9.1 |
| | Overlay Plane | Not Used | N/A |
| | VOI LUT | Used | 4.5.7.1 |
| | SOP Common | Used | 4.5.8.1 |

4.5 INFORMATION MODULE DEFINITIONS

Please refer to DICOM Standard Part 3 (Information Object Definitions) for a description of each of the entities and modules contained within the MR Information Object.

The following modules are included to convey Enumerated Values, Defined Terms, and Optional Attributes supported. Type 1 & Type 2 Attributes are also included for completeness and to define what values they may take and where these values are obtained. Associated tables contain expectations of the use of entities within the application. It should be noted that they are the same ones as defined in the DICOM Standard Part 3 (Information Object Definitions). No MR images are generated by the application.

4.5.1 Common Patient Entity Modules

4.5.1.1 Patient Module

This section specifies the Attributes of the Patient that describe and identify the Patient who is the subject of a diagnostic Study. This Module contains Attributes of the patient that are needed for diagnostic interpretation of the Image and are common for all studies performed on the patient.

TABLE 4.5-1
□PATIENT MODULE ATTRIBUTES

| Attribute Name | Tag | Type | Attribute Description |
|------------------------------|-------------|------|-----------------------|
| Patient's Name | (0010,0010) | 2 | Used |
| Patient ID | (0010,0020) | 2 | Used |
| Issuer of Patient ID | (0010,0021) | 3 | Used |
| Patient's Birth Date | (0010,0030) | 2 | Used |
| Patient's Sex | (0010,0040) | 2 | Used |
| Referenced Patient Sequence | (0008,1120) | 3 | Used |
| >Referenced SOP Class UID | (0008,1150) | 1C | Used |
| >Referenced SOP Instance UID | (0008,1155) | 1C | Used |

| >Issuer of Patient ID | (0010,0021) | 1 | Used |
| >Type of Patient ID | (0010,0022) | 1 | Used |
| Other Patient Names | (0010,1001) | 3 | Used |
| Ethnic Group | (0010,2160) | 3 | Ignored |
| Patient Comments | (0010,4000) | 3 | Ignored |

4.5.2 Common Study Entity Modules

The following Study IE Modules are common to all Composite Image IODs which reference the Study IE. These Modules contain Attributes of the patient and study that are needed for diagnostic interpretation of the image.

STATEMENT

DIR 5479282-1EN REV 2

4.5.2.1 General Study Module

This section specifies the Attributes that describe and identify the Study performed upon the Patient.

TABLE 4.5-2
GENERAL STUDY MODULE ATTRIBUTES

| Attribute Name | Tag | Type | Attribute Description |
|------------------------------------|-------------|------|-----------------------|
| Study Instance UID | (0020,000D) | 1 | Mandatory |
| Study Date | (0008,0020) | 2 | Used |
| Study Time | (0008,0030) | 2 | Used |
| Referring Physician's Name | (0008,0090) | 2 | Ignored |
| Study ID | (0020,0010) | 2 | Used |
| Accession Number | (0008,0050) | 2 | Ignored |
| Study Description | (0008,1030) | 3 | Used |
| Physician(s) of Record | (0008,1048) | 3 | Ignored |
| Name of Physician(s) Reading Study | (0008,1060) | 3 | Ignored |
| Referenced Study Sequence | (0008,1110) | 3 | Ignored |
| >Referenced SOP Class UID | (0008,1150) | 1C | |
| >Referenced SOP Instance UID | (0008,1155) | 1C | |
| Procedure Code Sequence | (0008,1032) | 3 | Ignored |
| >Code Value | (0008,0100) | 1C | |
| >Code Scheme Designator | (0008,0102) | 1C | |
| >Code Meaning | (0008,0104) | 1C | |

4.5.2.2 Patient Study Module

This section defines Attributes that provide information about the Patient at the time the Study was performed.

TABLE 4.5-3
PATIENT STUDY MODULE ATTRIBUTES

| Attribute Name | Tag | Type | Attribute Description |
|---------------------------------|-------------|------|-----------------------|
| Admitting Diagnoses Description | (0008,1080) | 3 | Ignored |
| Patient's Age | (0010,1010) | 3 | Ignored |
| Patient's Size | (0010,1020) | 3 | Ignored |
| Patient's Weight | (0010,1030) | 3 | Ignored |
| Occupation | (0010,2180) | 3 | Ignored |
| Additional Patient's History | (0010,21B0) | 3 | Ignored |

4.5.3 Common Series Entity Modules

The following Series IE Modules are common to all Composite Image IODs that reference the Series IE.

4.5.3.1 General Series Module

This section specifies the Attributes that identify and describe general information about the Series within a Study.

TABLE 4.5-4
GENERAL SERIES MODULE ATTRIBUTES

| Attribute Name | Tag | Type | Attribute Description |
|---------------------------------------|-------------|------|---|
| Modality | (0008,0060) | 1 | Used Defined Terms: MR = Magnetic Resonance |
| Series Instance UID | (0020,000E) | 1 | Mandatory |

|---------------|-------------|----|

4.5.4 Common Frame Of Reference Entity Modules

The following Frame of Reference IE Module is common to all Composite Image IODs that reference the Frame of Reference IE.

4.5.4.1 Frame Of Reference Module

MR Images do not need to share the same Frame Of Reference UID with the PET or CT.

TABLE 4.5-5
FRAME OF REFERENCE MODULE ATTRIBUTES

| Attribute Name | Tag | Type | Attribute Description |
|------------------------------|-------------|------|-----------------------|
| Frame of Reference UID | (0020,0052) | 1 | Mandatory |
| Position Reference Indicator | (0020,1040) | 2 | Ignored |

4.5.5 Common Equipment Entity Modules

The following Equipment IE Module is common to all Composite Image IODs which reference the Equipment IE.

4.5.5.1 General Equipment Module

This section specifies the Attributes that identify and describe the piece of equipment that produced a Series of Images.

TABLE 4.5-6
GENERAL EQUIPMENT MODULE ATTRIBUTES

| Attribute Name | Tag | Type | Attribute Description |
|-------------------------------|-------------|------|-----------------------|
| Manufacturer | (0008,0070) | 2 | Used |
| Institution Name | (0008,0080) | 3 | Used |
| Institution Address | (0008,0081) | 3 | Ignored |
| Station Name | (0008,1010) | 3 | Ignored |
| Institutional Department Name | (0008,1040) | 3 | Ignored |
| Manufacturer's Model Name | (0008,1090) | 3 | Used |
| Device Serial Number | (0018,1000) | 3 | Ignored |
| Software Versions | (0018,1020) | 3 | Ignored |
| Spatial Resolution | (0018,1050) | 3 | Ignored |
| Date of Last Calibration | (0018,1200) | 3 | Ignored |
| Time of Last Calibration | (0018,1201) | 3 | Ignored |
| Pixel Padding Value | (0028,0120) | 3 | Ignored |

STATEMENT

DIR 5479282-1EN REV 2

4.5.6 Common Image Entity Modules

The following Image IE Modules are common to all Composite Image IODs which reference the Image IE.

4.5.6.1 General Image Module

This section specifies the Attributes that identify and describe an image within a particular series.

TABLE 4.5-7
GENERAL IMAGE MODULE ATTRIBUTES

| Attribute Name | Tag | Type | Attribute Description |
|-------------------------------|-------------|------|-----------------------|
| Instance Number | (0020,0013) | 2 | Used |
| Patient Orientation | (0020,0020) | 2C | Ignored |
| Content Date | (0008,0023) | 2C | Used |
| Content Time | (0008,0033) | 2C | Used |
| Image Type | (0008,0008) | 3 | Used |
| Acquisition Number | (0020,0012) | 3 | Ignored |
| Acquisition Date | (0008,0022) | 3 | Ignored |
| Acquisition Time | (0008,0032) | 3 | Ignored |
| Referenced Image Sequence | (0008,1140) | 3 | Ignored |
| >Referenced SOP Class UID | (0008,1150) | 1C | |
| >Referenced SOP Instance UID | (0008,1155) | 1C | |
| Derivation Description | (0008,2111) | 3 | Ignored |
| Source Image Sequence | (0008,2112) | 3 | Ignored |
| >Referenced SOP Class UID | (0008,1150) | 1C | |
| >Referenced SOP Instance UID | (0008,1155) | 1C | |
| Images in Acquisition | (0020,1002) | 3 | Ignored |
| Image Comments | (0020,4000) | 3 | Ignored |
| Quality Control Image | (0028,0300) | 3 | Ignored |

| Lossy Image Compression | (0028,2110) | 3 | Used |
| Lossy Image Compression Ratio | (0028,2112) | 3 | Ignored |

4.5.6.2 Lossy Image Compression

Application does not support compressed images.

4.5.6.3 Image Plane Module

This section specifies the Attributes that define the transmitted pixel array of a two dimensional image plane.

TABLE 4.5-8
IMAGE PLANE MODULE ATTRIBUTES

| Attribute Name | Tag | Type | Attribute Description |
|-----------------------------|-------------|------|-----------------------|
| Pixel Spacing | (0028,0030) | 1 | Mandatory /Used |
| Image Orientation (Patient) | (0020,0037) | 1 | Mandatory |
| Image Position (Patient) | (0020,0032) | 1 | Mandatory |

STATEMENT

DIR 5479282-1EN REV 2

| | | | |
|-----------------|-------------|---|------|
| Slice Thickness | (0018,0050) | 2 | Used |
| Slice Location | (0020,1041) | 3 | Used |

4.5.6.3.1 Image Position

The Image Position is treated as the position of the upper left hand corner of the first pixel of the image for images coming from GE (Manufacturer is "GE MEDICAL SYSTEMS"), which software version (first value of Software Version) is earlier than 11.

The Image Position is treated as the position of the center of the first pixel of the image for images coming from other manufacturer than GE or MR GE systems that have MR 11.0 software (Excite II, ...) and above.

4.5.6.4 Image Pixel Module

This section specifies the Attributes that describe the pixel data of the image.

TABLE 4.5-9
IMAGE PIXEL MODULE ATTRIBUTES

| Attribute Name | Tag | Type | Attribute Description |
|---|-------------|------|-------------------------------------|
| Samples per Pixel | (0028,0002) | 1 | Ignored (expect "1") |

| Authorization Equipment Certification Number | (0100,0426) | 3 | Ignored |

4.5.8.1.1 Supported Character Sets

Depending on the platform on which the product is installed only a subset of character sets may actually be supported. Please refer to the platform DCS for more information about the platform supported character sets (Refer to Section 2.)

4.5.9 MR Modules

This Section describes MR Series, Equipment, and Image Modules. These Modules contain Attributes that are specific to MR Image IOD.

4.5.9.1 MR Image Module

The table in this Section contains IOD Attributes that describe MR Images.

TABLE 4.5-13
MR IMAGE MODULE ATTRIBUTES

| Attribute Name | Tag | Type | Attribute Description |
|--------------------------------|-------------|------|--------------------------------|
| Image Type | (0008,0008) | 1 | Used (Expect ORIGINAL\PRIMARY) |

4.6 PRIVATE DATA

The application ignores all private elements.

5. PET INFORMATION OBJECT IMPLEMENTATION

5.1 INTRODUCTION

This section specifies the use of the DICOM PET Image IOD to represent the information included in PET images used and produced by this implementation. Corresponding attributes are conveyed using the module construct. The contents of this section are:

- 5.2 PET IOD DESCRIPTION
- 5.3 PET ENTITY-RELATIONSHIP MODEL
- 5.4 IOD MODULE TABLE
- 5.5 INFORMATION MODULE DEFINITIONS

5.2 PET IOD DESCRIPTION

The Positron Emission Tomography (PET) Image Information Object Definition specifies an image which has been created by a Positron Tomography imaging device, including dedicated PET cameras and Nuclear Medicine imaging devices operating in coincidence mode. This includes data created by external detection devices which create images of the distribution of administered radioactive materials, specifically positron emitters, in the body. Depending on the specific radiopharmaceuticals administered and the particular imaging procedure performed, problems involving changes in metabolism function, or physiology can be investigated and various region pathologies can be studied. For these problems, quantitation of image data in absolute activity and physiological units is important. In addition, the PET Image IOD specifies attenuation (transmission) images used for correction and anatomical reference of emission images.

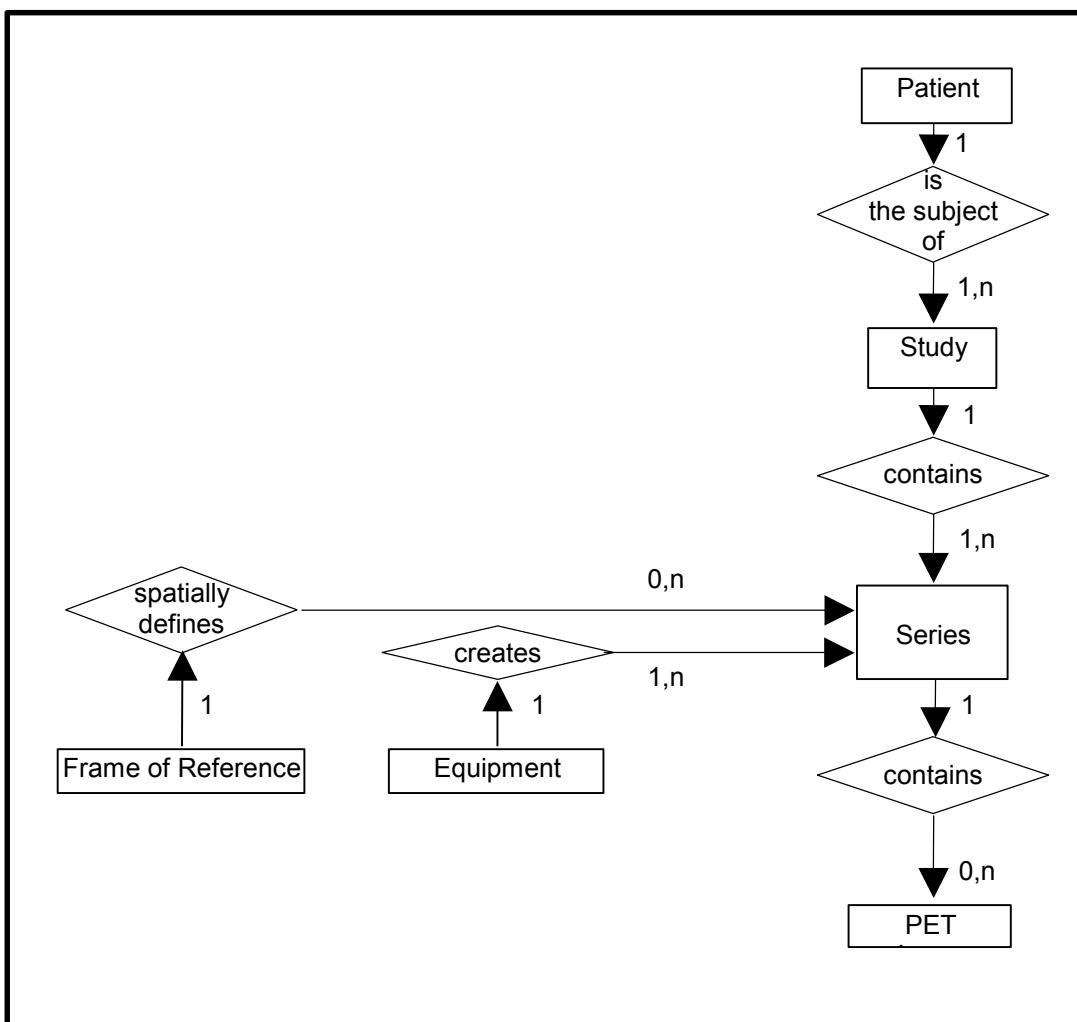

5.3 PET ENTITY-RELATIONSHIP MODEL

The Entity-Relationship diagram for the PET Image interoperability schema is shown in. In this figure Illustration-5.3.1, the following diagrammatic convention is established to represent the information organization:

- Each entity is represented by a rectangular box
- Each relationship is represented by a diamond shaped box.
- The fact that a relationship exists between two entities is depicted by lines connecting the corresponding entity boxes to the relationship boxes.

The relationships are fully defined with the maximum number of possible entities in the relationship shown. In other words, the relationship between Series and Image can have up to n Images per Series, but the Patient to Study relationship has 1 Patient for each Study (a Patient can have more than one Study on the system, however each Study will contain all of the information pertaining to that Patient).

ILLUSTRATION – 5.3-1
PET IMAGE ENTITY RELATIONSHIP DIAGRAM

5.3.1 Entity Descriptions

Please refer to DICOM Standard Part 3 (Information Object Definitions) for a description of each of the entities contained within the PET Information Object.

5.3.2 CortexID Suite Mapping of DICOM entities

TABLE 5.3-1
MAPPING OF DICOM ENTITIES TO CORTEXID SUITE ENTITIES

| DICOM | CortexID Suite Entity |

| Patient | Patient |
| Study | Exam |
| Series | Series |
| Image | Image |
| Frame | Not Applicable |

5.4 IOD MODULE TABLE

Within an entity of the DICOM PET IOD, attributes are grouped into related set of attributes. A set of related attributes is termed a module. A module facilitates the understanding of the semantics concerning the attributes and how the attributes

are related with each other. A module grouping does not infer any encoding of information into datasets.

Table 5.4-1 identifies the defined modules within the entities that comprise the DICOM PET IOD. Modules are identified by Module Name.

See DICOM Part 3 for a complete definition of the entities, modules, and attributes.

TABLE 5.4-1
PET IMAGE IOD MODULES

| Entity Name | Module Name | Usage | Reference |
|--------------------|-----------------------------|----------|-----------|
| Patient | Patient | Used | 5.5.1.1 |
| | Clinical Trial Subject | Not Used | N/A |
| Study | General Study | Used | 5.5.2.1 |

| | SOP Common | Used | 5.5.8.1 |

5.5 INFORMATION MODULE DEFINITIONS

Please refer to DICOM Standard Part 3 (Information Object Definitions) for a description of each of the entities and modules contained within the PET Information Object.

The following modules are included to convey Enumerated Values, Defined Terms, and Optional Attributes supported. Type 1 & Type 2 Attributes are also included for completeness and to define what values they may take and where these values are obtained. Associated tables contain expectations of the use of entities within the application. No PET images are generated by the application. It should be noted that they are the same ones as defined in the DICOM Standard Part 3 (Information Object Definitions).

STATEMENT

DIR 5479282-1EN REV 2

5.5.1 Common Patient Entity Modules**5.5.1.1 Patient Module**

This section specifies the Attributes of the Patient that describe and identify the Patient who is the subject of a diagnostic Study. This Module contains Attributes of the patient that are needed for diagnostic interpretation of the Image and are common for all studies performed on the patient.

TABLE 5.5-1
PATIENT MODULE ATTRIBUTES

| Attribute Name | Tag | Type | VR | Attribute Description |
|------------------------------|-------------|------|----|-----------------------|
| Patient's Name | (0010,0010) | 2 | PN | Used / Copied |

5.5.6.1.1 General Image Attribute Descriptions**5.5.6.1.1.1 Patient Orientation**

The application uses Image Orientation Patient (0020,0037) and Image Position Patient (0020,0032).

This field will be filled for 2D reformatted and 3D views, and will be empty (zero length) for other views

The precision depth could be up to 3 characters, for example "LAF\FAR ", but can be less if the view is oriented along a baseline, like "L\FA" or "L\F".

5.5.6.1.1.2 Image Type

The expected image type for used images is

Value 1 has the following value:

- ORIGINAL all images used are original images from the PET image acquisition system. Application does not support source data (raw scan data).

Value 2 has the following value:

- PRIMARY assumes all images used are part of initial patient examination.

Value 3 has the following value:

- AXIAL assumes all images used contain a transaxial orientation as part of initial patient examination.

For Reformat Images, the values are generated as follows:

Value 1 has the following value:

- DERIVED images shall be derived from original PET images generated using image acquisition system

Value 2 has the following value:

- PRIMARY images shall be created by the application

Value 3 has the following value:

- REFORMATTED Images can have Axial, Sagittal, Coronal or Oblique orientation

5.5.6.2 Image Plane Module

This section specifies the Attributes that define the transmitted pixel array of a two dimensional image plane.

**TABLE 5.5-8
IMAGE PLANE MODULE ATTRIBUTES**

| Attribute Name | Tag | Type | VR | Attribute Description |
|-----------------------------|-------------|------|----|---------------------------------------|
| Pixel Spacing | (0028,0030) | 1 | DS | Mandatory /Generated |
| Image Orientation (Patient) | (0020,0037) | 1 | DS | Mandatory /Generated |
| Image Position (Patient) | (0020,0032) | 1 | DS | Mandatory /Generated See 5.5.6.2.1 |
| Slice Thickness | (0018,0050) | 2 | DS | Used / Generated |
| Slice Location | (0020,1041) | 3 | DS | Ignored / Generated |

5.5.6.2.1 Image Position

The Image Position is treated as the position of the upper left hand corner of the first pixel of the image for images coming from GE (Manufacturer is "GE MEDICAL SYSTEMS") where the Manufacturer Model Name is "Advance", "Discovery LS" or "Discovery QX/I".

Otherwise, the Image Position is treated as the position of the center of the first pixel of the image.

5.5.6.3 Image Pixel Module

This section specifies the Attributes that describe the pixel data of the image.

**TABLE 5.5-9
IMAGE PIXEL MODULE ATTRIBUTES**

| Attribute Name | Tag | Type | VR | Attribute Description |
|----------------------------|-------------|------|----|---|
| Samples per Pixel | (0028,0002) | 1 | US | Ignored / Generated (Value - '1') |
| Photometric Interpretation | (0028,0004) | 1 | CS | Ignored / Generated (Value - "MONOCHROME2") |
| Rows | (0028,0010) | 1 | US | Mandatory / Generated (expect from 64 to 256) |
| Columns | (0028,0011) | 1 | US | Mandatory / Generated (expect from 64 to 256) |
| Bits Allocated | (0028,0100) | 1 | US | Ignored / Generated (Value = 16) |

5.5.8 General Modules

The SOP Common Module is mandatory for all DICOM IODs.

5.5.8.1 SOP Common Module

This section defines the Attributes that are required for proper functioning and identification of the associated SOP Instances. They do not specify any semantics about the Real-World Object represented by the IOD.

TABLE 5.5-11
SOP COMMON MODULE ATTRIBUTES

| Attribute Name | Tag | Type | VR | Attribute Description |
|--|--------------|------|----|---|
| SOP Class UID | (0008,0016) | 1 | UI | Used / Generated |
| SOP Instance UID | (0008,0018) | 1 | UI | Used / Generated |
| Specific Character Set | (0008,0005) | 1C | CS | Used / Generated Supported Character sets : ISO_IR 100 ISO_IR 144 \ISO 2022 IR 87 \ISO 2022 IR 149 ISO IR 192 GB18030 ISO 2022 IR 13 \ ISO 2022 IR 87 See 5.5.8.1.1. |
| Instance Creation Date | (0008,0012) | 3 | DA | Ignored / Generated (Value = Current Date) |
| Instance Creation Time | (0008,0013) | 3 | TM | Ignored / Generated (Value = Current Time) |
| Instance Creator UID | (0008,0014) | 3 | UI | Ignored / Removed |

5.5.8.1.1 Supported Character Sets

Depending on the platform on which the product is installed only a subset of character sets may actually be supported. Please refer to the platform DCS for more information about the platform supported character sets (Refer to Section 2.)

5.5.9 PET Modules

This Section describes PET Series, Equipment, and Image Modules. These Modules contain Attributes that are specific to PET Image IOD.

5.5.9.1 PET Series

The table in this Section contains IOD Attributes that describe PET Series.

TABLE 5.5-12
PET SERIES MODULE ATTRIBUTES

| Attribute Name | Tag | Type | VR | Attribute Description |
|-------------------------------|-------------|------|----|--|
| Series Date | (0008,0021) | 1 | DA | Used / copied |
| Series Time | (0008,0031) | 1 | TM | Used / copied |

6. SECONDARY CAPTURE INFORMATION OBJECT IMPLEMENTATION

6.1 INTRODUCTION

This section specifies the use of the DICOM SC Image IOD to represent the information included in SC images produced by this implementation. This implementation does not use (load) general DICOM SC images. Corresponding attributes are conveyed using the module construct. The contents of this section are:

- 6.2 SC IOD Implementation
- 6.3 SC Entity-Relationship Model
- 6.4 IOD MODULE TABLE
- 6.5 INFORMATION MODULE DEFINITIONS

6.2 SC IOD IMPLEMENTATION

The Secondary Capture (SC) Image Information Object Definition (IOD) specifies images that are converted from a non-DICOM format to a modality independent DICOM format.

In the CortexID Suite application, displays PET, CT and MR image volumes in MPR (Multi-Plane Reformat) views. It also provides viewing of PET and CT fused, or PET and MR fused images. To allow for results of the analysis to be shared with other physicians, the application provides a feature for the user to save a view of a particular image or screen layout as a DICOM Secondary Capture IOD. The images are saved to the AW/AW Server. Once in the database, any network function provided by the AW is available for the images, such as viewing or filming in the viewer or Filmer, archival to a PACS, or storage on a DICOM removable media.

Secondary Capture Images are also used to store the internal state/results of the CortexID Suite application, called Save Results. This type of object can be read or written by the application, using the private fields. Actual data are retrieved from the original images that the Save Results points to. The value of Image Type is DERIVED\SECONDARY\CAPTURE\CORTEXID_RESULTS. See table 6.2-17 for the description of private tags used for Secondary Capture images.

In addition to directly creating the Secondary Capture images, the CortexID Suite application can send views of images to the AW/AW Server filer directly. From the AW/AW Server filer they can be filmed or saved to the AW/AW Server database.

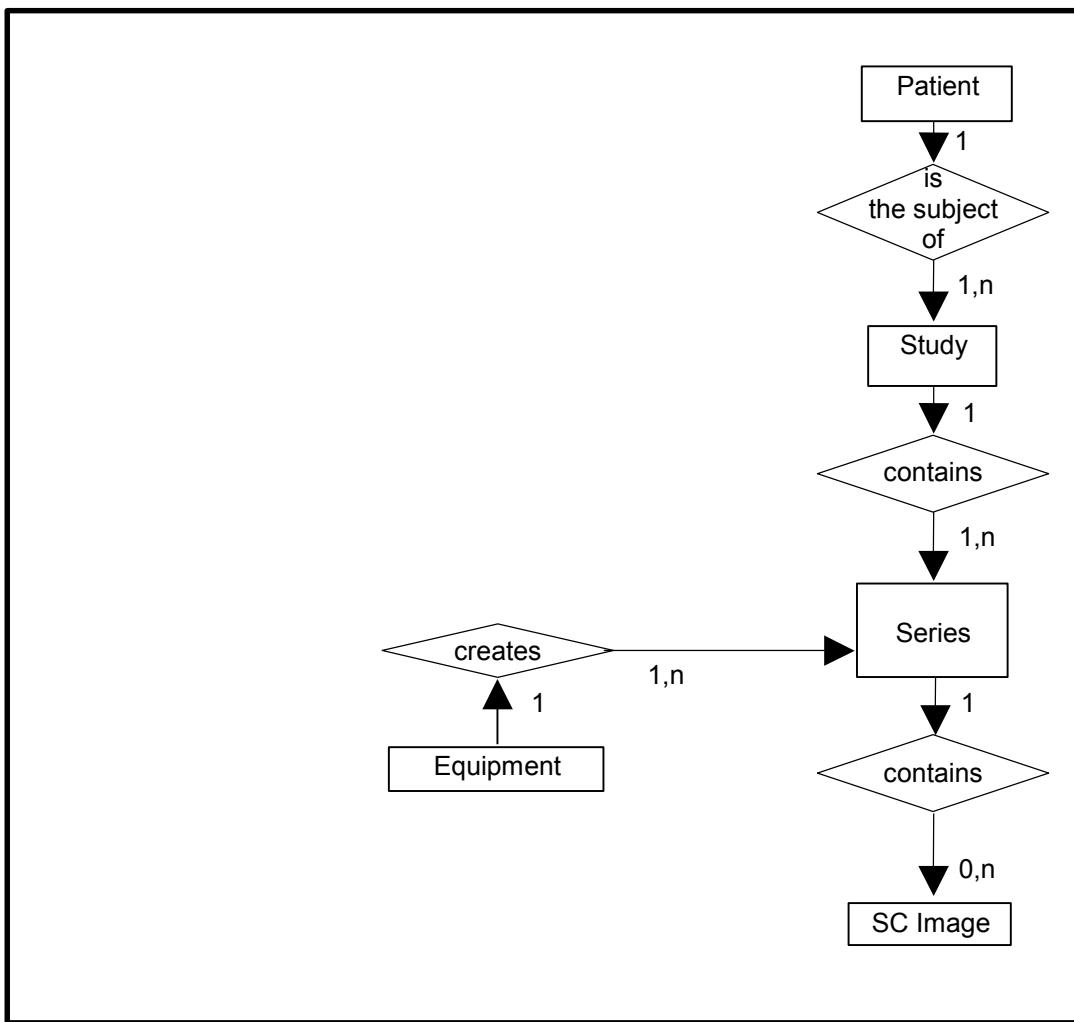

6.3 SC ENTITY-RELATIONSHIP MODEL

The Entity-Relationship diagram for the SC Image interoperability schema is shown in Illustration 6.3-1. In this figure, the following diagrammatic convention is established to represent the information organization:

- Each entity is represented by a rectangular box
- Each relationship is represented by a diamond shaped box.
- The fact that a relationship exists between two entities is depicted by lines connecting the corresponding entity boxes to the relationship boxes.

The relationships are fully defined with the maximum number of possible entities in the relationship shown. In other words, the relationship between Series and Image can have up to n Images per Series, but the Patient to Study relationship has 1 Patient for each Study (a Patient can have more than one Study on the system, however each Study will contain all of the information pertaining to that Patient).

ILLUSTRATION 6.3-1
SC IMAGE ENTITY RELATIONSHIP DIAGRAM

6.3.1 ENTITY DESCRIPTIONS

Please refer to DICOM Standard Part 3 (Information Object Definitions) for a description of each of the entities contained within the SC Information Object.

6.3.2 Mapping of DICOM entities

TABLE 6.3-1
MAPPING OF DICOM ENTITIES TO APPLICATION ENTITIES

| DICOM | Application Entity |
|---------|--------------------|
| Patient | Patient |
| Study | Exam |
| Series | Series |
| Image | Image |
| Frame | Not Applicable |

6.4 IOD MODULE TABLE

Within an entity of the DICOM v3.0 SC IOD, attributes are grouped into related set of attributes. A set of related attributes is termed a module. A module facilitates the understanding of the semantics concerning the attributes and how the attributes are related with each other. A module grouping does not infer any encoding of information into datasets.

Table 6.4-1 identifies the defined modules within the entities which comprise the DICOM v3.0 SC IOD. Modules are identified by Module Name.

See DICOM v3.0 Part 3 for a complete definition of the entities, modules, and attributes.

All elements described as "Copied" are copied from the originating series for PET, MR or CT secondary captures, respectively. For the creation of a fused image secondary capture or full screen capture, the application copies all elements from the originating PET image series.

TABLE 6.4-1
SC IMAGE IOD MODULES

| Entity Name | Module Name | Usage | Reference |
|-------------|------------------------|----------|-----------|
| Patient | Patient | Used | 6.5.1.1 |
| | Clinical Trial Subject | Not Used | N/A |
| Study | General Study | Used | 6.5.2.1 |
| | Patient Study | Used | 6.5.2.2 |
| | Clinical Trial Study | Not Used | N/A |
| Series | General Series | Used | 6.5.3.1 |
| | Clinical Trial Series | Not Used | N/A |
| Equipment | General Equipment | Used | 6.5.5.1 |
| | SC Equipment | Used | 6.5.4.1 |
| Image | General Image | Used | 6.5.6.1 |
| | Image Pixel | Used | 6.5.6.2 |
| | Device | Not Used | N/A |
| | Specimen | Not Used | N/A |
| | SC Image | Used | 6.5.4.2 |
| | Overlay Plane | Not Used | N/A |
| | Modality LUT | Used | 6.5.7.2 |
| | VOI LUT | Used | 6.5.7.1 |
| | ICC Profile | Not Used | N/A |
| | SOP Common | Used | 6.5.8.1 |

6.5 INFORMATION MODULE DEFINITIONS

Please refer to DICOM v3.0 Standard Part 3 (Information Object Definitions) for a description of each of the entities and modules contained within the SC Information Object.

The following modules are included to convey Enumerated Values, Defined Terms, and Optional Attributes supported. Type 1 & Type 2 Attributes are also included for completeness and to define what values they may take and where

these values are obtained from. It should be noted that they are the same ones as defined in the DICOM v3.0 Standard Part 3 (Information Object Definitions).

6.5.1 Common Patient Entity Modules

6.5.1.1 Patient Module

This section specifies the Attributes of the Patient that describe and identify the Patient who is the subject of a diagnostic Study. This Module contains Attributes of the patient that are needed for diagnostic interpretation of the Image and are common for all studies performed on the patient.

TABLE 6.5-1
■PATIENT MODULE ATTRIBUTES

| Attribute Name | Tag | Type | VR | Attribute Description |

6.5.2 Common Study Entity Modules

The following Study IE Modules are common to all Composite Image IODs which reference the Study IE. These Module contain Attributes of the patient and study that are needed for diagnostic interpretation of the image.

STATEMENT

DIR 5479282-1EN REV 2

6.5.2.1 General Study Module

This section specifies the Attributes which describe and identify the Study performed upon the Patient.

TABLE 6.5-2

| Burned In Annotations | (0028,0301) | 3 | CS | Generated The Defined Terms are: YES = Annotations burned in NO = Annotations not burned in |
| Lossy Image Compression Ratio | (0028,2112) | 3 | DS | Removed See 6.5.6.1.1.5 |
| Lossy Image Compression | (0028,2110) | 3 | CS | Copied See 6.5.6.1.1.5 |

6.5.6.1.1 General Image Attribute Descriptions**6.5.6.1.1.1 Patient Orientation**

Since Secondary Captures do not include the patient orientation, this field must be present. This field will be filled for 2D reformatted and 3D views, and will be empty (zero length) for other views.

The precision depth could be up to 3 characters, for example "LAF\FAR", but can be less if the view is oriented along a baseline, like "L\FA" or "L\F".

6.5.6.1.1.2 Image Date and Time

When the application is saving a secondary capture:

- the condition to set these tags should be used if the image are temporally related, but is not clearly met for reformatted images ; anyway, since most AE will expect this tag to be present, we have decided to set this tag
- Application might set this content date to the time the reformatted image is created, but then might move away from the purpose of this date which is linked to the acquisition
- Application might set it to the original image date, but it does not make sense for reformatted images which are derived from several images

For these reasons, the application will set an empty tag to avoid possible ambiguities.

6.5.6.1.1.3 Image Type

Value 1 has the following value:

- * DERIVED identifies a Derived Image

Value 2 has the following value:

- * SECONDARY identifies a Secondary Image

Value 3 has the following value:

- * CAPTURE identifies Screen Capture Image

Value 4 has the following value:

- * CORTEXID_RESULTS identifies a 3D state SC Capture from CortexID Suite

6.5.6.1.1.4 Source Image Sequence

When Image Type (0008,0008) has CORTEXID_RESULTS in value 4 (Refer to Section 6.5.6.1.1.3), then this sequence will contain the instances for the images loaded into the application to create the save state.

6.5.6.1.1.5 Lossy Image Compression

The application does not use compression when saving images, nor does it decompress images. The application will ignore these tags.

6.5.6.2 Image Pixel Module

This section specifies the Attributes that describe the pixel data of the image.

TABLE 6.5-9
IMAGE PIXEL MODULE ATTRIBUTES

| Attribute Name | Tag | Type | VR | Attribute Description |
|----------------------------|-------------|------|----|--|
| Samples per Pixel | (0028,0002) | 1 | US | Generated • "1" for grayscale images • "3" for color images |

6.6 SC PRIVATE DATA

The processed results state of the application is saved in a SC image and is read only if the Image Type(0008,0008) has CORTEXID_RESULTS in value 4 (Refer to Section 6.5.6.1.1.3).

The following private tags are used to save and restore the state of the application.

7. ENCAPSULATED PDF INFORMATION OBJECT IMPLEMENTATION

7.1 INTRODUCTION

This section specifies the use of Encapsulated PDF IOD used to represent the information included in the PDF document. Corresponding attributes are conveyed using the module construct. The contents of this section are:

- 7.2 ENCAPSULATED PDF IOD DESCRIPTION
- 7.3 ENCAPSULATED PDF ENTITY-RELATIONSHIP MODEL
- 7.4 IOD MODULE TABLE
- 7.5 INFORMATION MODULE DEFINITIONS

7.2 ENCAPSULATED PDF IOD DESCRIPTION

Encapsulated PDF IOD description specifies a document generated by the application in a PDF file format.

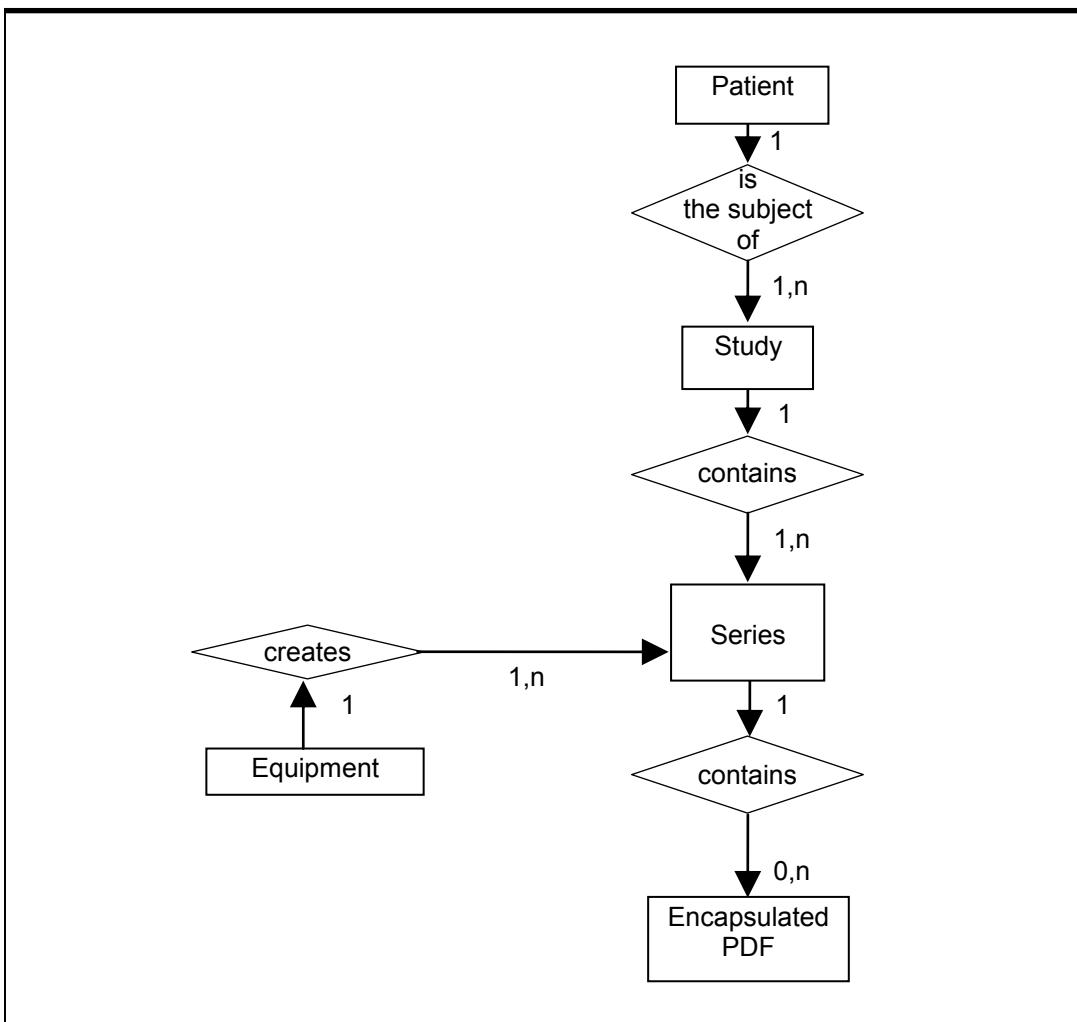

7.3 ENCAPSULATED PDF ENTITY-RELATIONSHIP MODEL

The Entity-Relationship diagram for the Encapsulated PDF interoperability schema is shown in. In this figure Illustration-7.3.1, the following diagrammatic convention is established to represent the information organization:

- Each entity is represented by a rectangular box
- Each relationship is represented by a diamond shaped box.
- The fact that a relationship exists between two entities is depicted by lines connecting the corresponding entity boxes to the relationship boxes.

The relationships are fully defined with the maximum number of possible entities in the relationship shown 7.3-1. In other words, the relationship between Series and encapsulated PDF can have up to n documents per Series, but the Patient to Study relationship has 1 Patient for each Study (a Patient can have more than one Study on the system, however each Study will contain all of the information pertaining to that Patient).

ILLUSTRATION – 7.3-1
ENCAPSULATED PDF IMAGE ENTITY RELATIONSHIP DIAGRAM

7.3.1 Entity Descriptions

Please refer to DICOM Standard Part 3 (Information Object Definitions) for a description of each of the entities contained within the Encapsulated PDF Information Object.

7.3.2 CortexID Suite Mapping of DICOM entities

TABLE 7.3-1
MAPPING OF DICOM ENTITIES TO CORTEXID SUITE ENTITIES

| DICOM | CortexID Suite Entity |
|------------------|-----------------------|
| Patient | Patient |
| Study | Exam |
| Series | Series |
| Image | Image |
| Encapsulated PDF | Encapsulated PDF |
| Frame | Not Applicable |

Within an entity of the Encapsulated PDF IOD, attributes are grouped into related set of attributes. A set of related attributes is termed a module. A module facilitates the understanding of the semantics concerning the attributes and how the attributes are related with each other. A module grouping does not infer any encoding of information into datasets.

Table 7.4-1 identifies the defined modules within the entities that comprise the DICOM PET IOD. Modules are identified by Module Name.

See DICOM Part 3 for a complete definition of the entities, modules, and attributes.

**TABLE 7.4-1
ENCAPSULATED PDF IOD MODULES**

| Entity Name | Module Name | Usage | Reference |
|-----------------------|------------------------------|----------|-----------|
| Patient | Patient | Used | 7.5.1.1 |
| | Clinical Trial Subject | Not Used | N/A |
| Study | General Study | Used | 7.5.2.1 |
| | Patient Study | Used | 7.5.2.2 |
| | Clinical Trial Study | Not Used | N/A |
| Series | Encapsulated Document Series | Used | 7.5.3.1 |
| | Clinical Trial Series | Not Used | N/A |
| Equipment | General Equipment | Used | 7.5.4.1 |
| | SC Equipment | Used | 7.5.4.2 |
| Encapsulated Document | Encapsulated Document | Used | 7.5.5.1 |
| | SOP Common | Used | 7.5.5.2 |

7.5 INFORMATION MODULE DEFINITIONS

Please refer to DICOM Standard Part 3 (Information Object Definitions) for a description of each of the entities and modules contained within the PET Information Object.

The following modules are included to convey Enumerated Values, Defined Terms, and Optional Attributes supported. Type 1 & Type 2 Attributes are also included for completeness and to define what values they may take and where these values are obtained. Associated tables contain expectations of the use of entities within the application.

7.5.1 Common Patient Entity Modules

7.5.1.1 Patient Module

This section specifies the Attributes of the Patient that describe and identify the Patient who is the subject of a diagnostic Study. This Module contains Attributes of the patient that are needed for diagnostic interpretation of the document and are common for all studies performed on the patient.

TABLE 7.5-1
□PATIENT MODULE ATTRIBUTES

| Attribute Name | Tag | Type | VR | Attribute Description |
